

Create a fully responsive HTML/CSS/JS layout for a modern Thailand travel booking system that strictly matches the provided reference images.

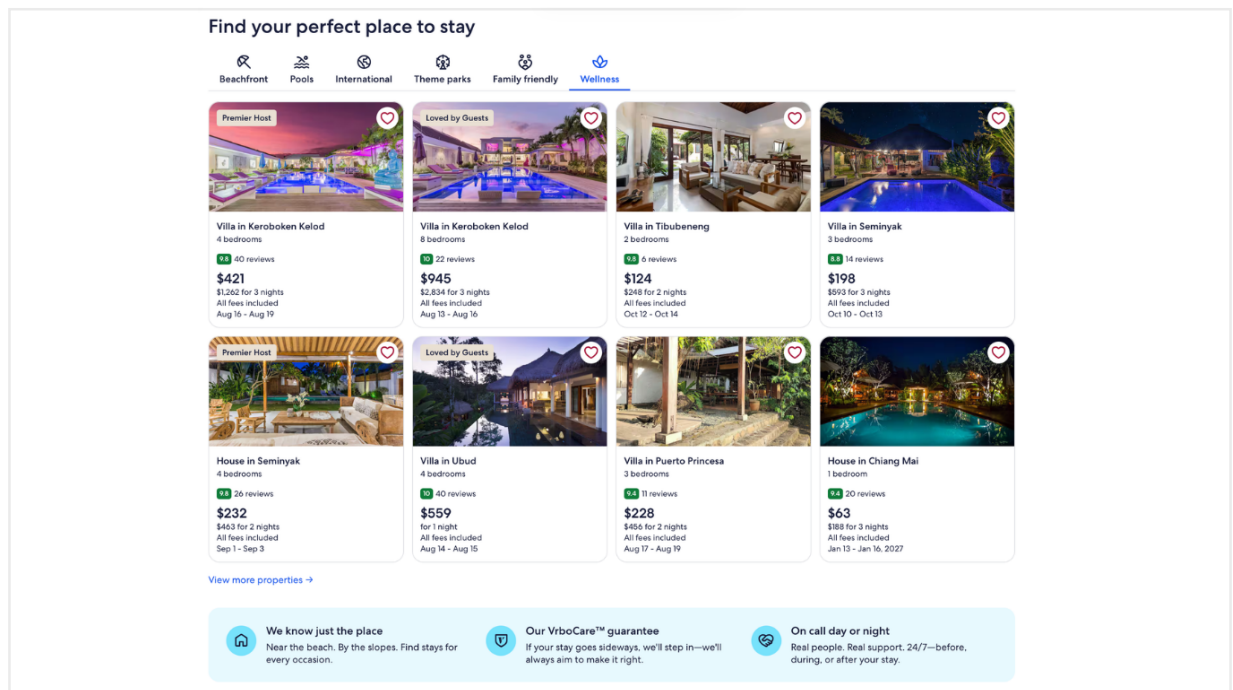

- **Hero Section:** The landing page should feature a full-screen, high-quality background video of Thailand (e.g., Thai beaches or temples) with an elegant text overlay welcoming users. (refer to image1.png)

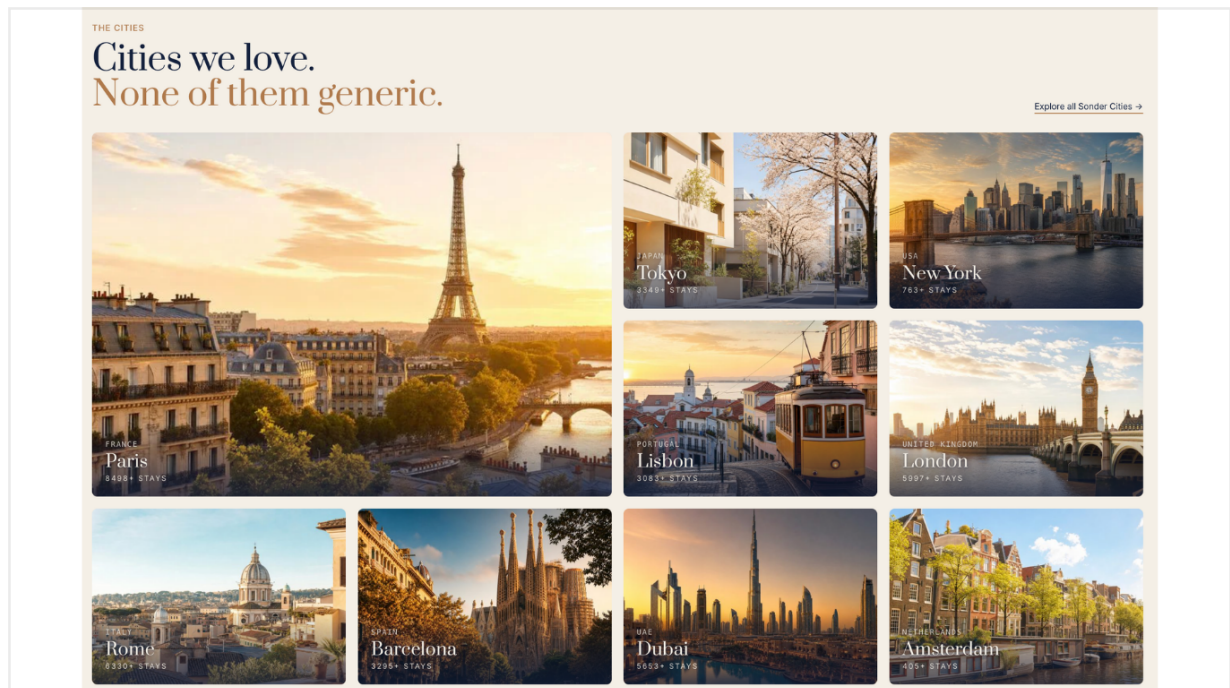

- **Scroll & Sticky Animation:** As the user scrolls, use smooth CSS transitions and JavaScript so the video slides up, shrinks seamlessly to 20% of the screen height, fades into a static high-res image, and locks into a sticky position at the top (ensuring the fixed navigation header remains separate and visible) (refer to image2.png).

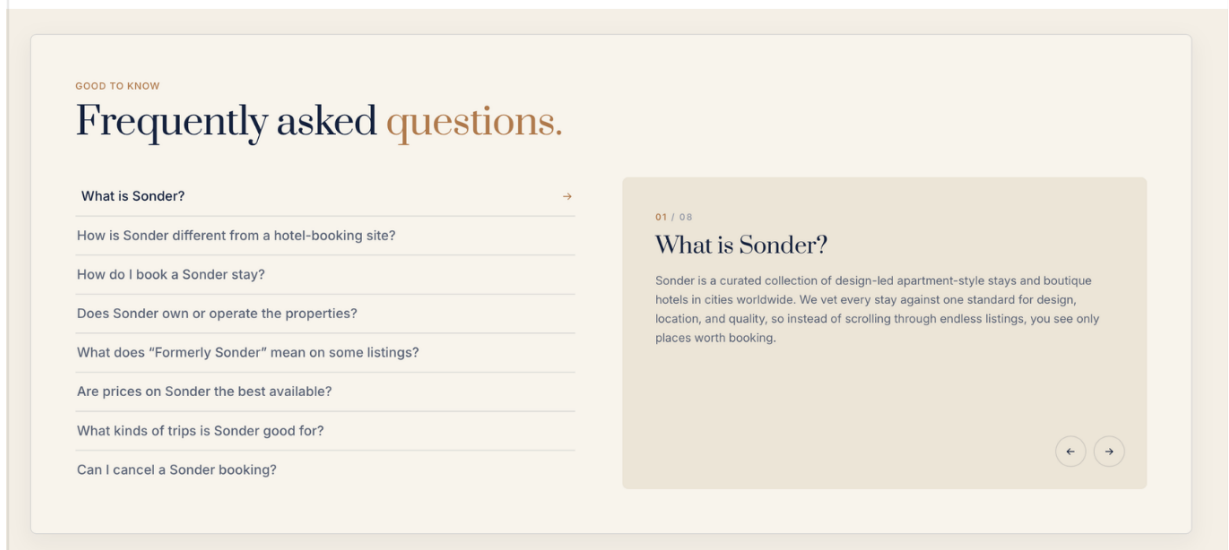

- **Map & Destinations:** Below the sticky media, integrate a functional Google Maps API iframe centered on Thailand. Adjacent to the map, create a modern CSS grid of destination cards (e.g., Bangkok, Phuket, Chiang Mai) that feature hover animations (e.g., slight zoom or shadow lift) (refer to image3.png).

- **Tour Booking Grid:** As the user continues scrolling, display a tour package grid (matching the reference images). Each card should include a thumbnail image, tour title, duration, price, star rating, and a stylized 'Book Now' button (refer to image4.png).

- **FAQ Section:** Finish the page with an interactive Frequently Asked Questions (FAQ) accordion section covering essential Thailand travel tips (e.g., visas, currency, best time to visit) (refer to image5.png).

-
- **Styling & Tech Requirements:** Use semantic HTML5, pure CSS (or Tailwind/Bootstrap if preferred), clean typography (via Google Fonts), and a vibrant Thai-inspired color palette (e.g., sunset orange and ocean blue). Ensure the entire layout is mobile-friendly and adapts perfectly to tablet and smartphone screens."
